## Consequentialism and The Wrong Kind of Reasons: A Reply to Lang

JOHN BRUNERO

*University of Missouri, St. Louis*

In his paper 'The Right Kind of Solution to the Wrong Kind of Reason Problem', Gerald Lang formulates the buck-passing account of value so as to resolve the Wrong Kind of Reason Problem. I argue against his formulation of buck-passing. Specifically, I argue that his formulation of buck-passing is not compatible with consequentialism (whether direct or indirect), and so it should be rejected.

According to the buck-passing account of value, as presented by T.M. Scanlon, 'being good, or valuable, is not a property that itself provides a reason to respond to a thing in a certain way. Rather, to be good is to have other properties that constitute such reasons.'<sup>1</sup> On this account, to say that something is good, or valuable, is to say that it possesses the 'purely formal, higher-order property' of having other, lower-order properties that provide reasons to respond to that thing in a certain positive way -- perhaps by choosing, preferring, recommending, respecting, or admiring that thing. Consider, for example, a good resort, or a valuable scientific discovery. According to Scanlon's account, 'the fact that a resort is pleasant is a reason to visit it, or to recommend it to a friend, and the fact that a discovery casts light on the causes of cancer is a reason to applaud it and to support further research of that kind.'<sup>2</sup> On this account, the fact that the scientific discovery *is valuable* does not itself provide a reason to respond to it in certain ways; rather, the 'buck is passed' to those *other, lower-order* properties, such as the fact that the discovery casts light on the causes of cancer, that do provide such reasons.

Buck-passing is attractive to many because it presents a conceptual connection between concepts usually thought to be distinct: the axiological concept of *good* (or valuable) and the deontic concept of *a reason*. As some have noted, this conceptual

connection allows for us to 'demystify' value by understanding value in terms of reasons.<sup>3</sup>

For instance, Gerald Lang writes:

Value properties are indirectly reduced to reason-providing properties, in that the property of being good is held, by the buck-passing account, to be simply the higher-order non-reason-providing-property of having other, lower-order reason-providing properties. As a result, the buck-passing account usefully provides for a conceptual or internal connection between the realm of the evaluative and the realm of the deontic, which means that we can pour all of our philosophical energy into identifying reasons, rather than into identifying values which those reasons supposedly, or hopefully, track.<sup>4</sup>

So, we can understand buck-passers as asserting the following biconditional, along with the claim that the concepts on the right hand side reductively explain the concepts on the left hand side: something is good (or valuable) if and only if it has properties (besides its being good) that provide a reason to respond to it in a certain positive way.

The Wrong Kind of Reason Problem (*WKRP*) is usually presented through examples which show that an object could have properties that provide a reason to respond to it in a certain positive way *without* its being good (or valuable).<sup>5</sup> Suppose an Evil Demon threatens to inflict a great deal of pain on us unless we admire him. The Evil Demon has a property (his having threatened us) which gives us a reason to respond in a certain positive way (by admiring him), but surely the Demon is not good or valuable.<sup>6</sup> The *WKRP* shows that buck-passing fails to state a sufficient condition for something's being good.

Intuitively, our reason here for admiring the Demon is a *different kind of reason* from our reason for admiring the scientific discovery. The challenge for defenders of buck-passing is to clearly articulate the distinction between these intuitively different kinds of reasons, and to formulate buck-passing to make it invulnerable to counterexamples in which the properties of an object provide 'the wrong kind of reason' for having a certain positive response towards it, as the Demon's threat does.

In his article 'The Right Kind of Solution to the Wrong Kind of Reason Problem', Gerald Lang presents a new formulation of buck-passing and argues -- soundly, I think -- that his formulation is not threatened by this Evil Demon example nor by any other similar counterexamples that have emerged in the philosophical literature on the *WKR*P. I'll here present (§I) Lang's promising version of buck-passing, and suggest a minor modification to improve it. I'll then argue (§II) that we should reject Lang's version of buck-passing (even with the minor modification) because it is not compatible with consequentialism. More precisely, I'll argue that if consequentialism (whether direct or indirect) is true, then Lang's formulation of buck-passing would rule out, by definition, certain plausible theories of the good.

§I.

After rejecting five potential versions of buck-passing, Lang settles on the following version:

(*BPV6*) *X* is good if and only if *X* has properties (other than its being good) that give us reason to have a certain positive attitude towards *X*, just as long as those properties of *X* that give us reason to have that attitude towards *X* would still be

reason-giving in the absence of the benefits to us of having that attitude towards  $X$ .<sup>7</sup>

This version of buck-passing requires that we employ a counterfactual test: we must ask, 'If there were no benefits to us of having a certain positive attitude  $A$  towards  $X$ , would the properties of  $X$  still give us reason to have  $A$  towards  $X$ ?' If we answer in the affirmative, then, and only then, is  $X$  good.

The formulation is quite promising since it deals well with the examples we have considered, as well as with other examples that I won't have space to mention here. Consider the Evil Demon. If there were no benefits to us in admiring the Demon -- if doing so would not help us avoid the great deal of pain -- then the properties of the Demon *would not* give us reason to admire the Demon. And so *(BPV6)* does not entail that the Demon is good. Now consider the scientific discovery. If there were no benefits to us in admiring the scientific discovery, the properties of the discovery (specifically, that it sheds light on the causes of cancer) *would* still give us reason to admire the discovery. According to *(BPV6)*, then, the scientific discovery is good.

One curious feature of *(BPV6)*, however, is the use of the phrase 'the benefits to us' in the counterfactual clause, '... just as long as those properties of  $X$  that give us reason to have that attitude towards  $X$  would still be reason-giving in the absence of the benefits to us of having that attitude towards  $X$ '. Suppose the Evil Demon threatens that unless we admire him, he'll inflict a great deal of pain on *some other people* unknown to us. His threat gives us a (moral) reason to admire him, and this reason would persist in the absence of the benefits to us of admiring him (since *we* don't benefit, though others surely do, from our admiring him). And, so, *(BPV6)* here entails the absurd conclusion that this

Evil Demon is good. In light of this worry, Lang could modify (*BPV6*), perhaps by simply replacing 'benefits to us' with 'benefits' in the counterfactual clause, giving us:

*(Modified BPV6)* *X* is good if and only if *X* has properties (other than its being good) that give us reason to have a certain positive attitude towards *X*, just as long as those properties of *X* that give us reason to have that attitude towards *X* would still be reason-giving in the absence of the benefits of having that attitude towards *X*.

Since the Demon's threat here would not be reason-giving in the absence of the *benefits* of admiring him, it doesn't follow from (*Modified BVP6*) that the Demon is good.

## §II.

So far we have considered a couple of good objects (a good resort and a valuable scientific discovery) and one bad object (an Evil Demon) that have properties that provide us with reasons to respond in various ways: the good resort has a property that provides us with a reason to visit it and recommend it, the valuable scientific discovery has a property that provides us with a reason to applaud it and support further research of that kind, and the Evil Demon has a property that provides us with a reason to admire it. In just these three examples, there is a fairly wide variety of responses that, it is claimed, we have reason to have.

These claims about how we should respond to the objects of value are, like the claims about which objects are valuable, ordinary ethical claims. As such, they may be informed by ethical theory. An ethical theory may tell us, first, *what* is valuable -- it may provide a so-called "theory of the good" -- and may tell us, second, *how we should*

*respond* to what is valuable. Consequentialism is usually understood to be an answer to the second query, one which tells us that agents, whether individual or institutional, should respond by *promoting* the general realization what is of value. Non-consequentialists, however, think that one should respond by *honoring* what is of value (perhaps by having the object of value figure prominently in one's own life, or in one's own actions) even when honoring what is of value fails to promote its general realization. Let's take an example borrowed from Philip Pettit. Suppose our theory of the good specifies that what matters above all in life is the enjoyment of personal loyalties. As Pettit notes, we are now left with a question of how we should respond to what is of value:

Should I honour the value in my own life, devoting myself to developing the bonds of kith and kin? Or should I only permit myself such devotion so far as that is part of the more general prospect of promoting the enjoyment of personal loyalties? Should I be prepared to use my time in the manner most effective for that project even if the cost of doing so -- say, the cost of spending so much time on journalism and politics -- is that my own personal loyalties are put under severe strain?<sup>8</sup>

Consequentialists answer that the proper response to objects of value is to *promote* their general realization; one should *honor* values only insofar as doing so constitutes, or is necessary for, promoting them.<sup>9</sup> Here, one should permit oneself devotion to developing the bonds of kith and kin only insofar as doing so is part of the more general prospect of promoting the enjoyment of personal loyalties.

Consequentialists, however, are also sensitive to the fact that the most effective way to promote what is of value may not be the *direct* approach of calculating, for each individual option, whether that option better promotes what is of value than any other option. In other words, the attitude of *aiming to promote* what is of value may be an attitude that we have good reason not to have; we may actually do better at promoting what is of value by having *other attitudes*. For instance, we can easily imagine how someone who is an 'incessant loyalty calculator' -- that is, someone who calculates, for each individual option, whether that option promotes the general realization of the enjoyment of personal loyalties better than any other option -- would fail to inspire the loyalty of others. (After all, if you seriously consider such questions as 'Would my breaking my loyalties to Anna allow me to develop loyalties with Bob and Carol, and thereby more effectively promote the general realization of the enjoyment of personal loyalties?' and you are the least bit transparent, you would likely fail to inspire others to be loyal to you. And your political and journalistic efforts would then be unconvincing and ineffective.) It might be that you best promote loyalties by *honoring* the bonds of kith and kin, even when it appears to you that by breaking those bonds you could better promote the general realization of the enjoyment of personal loyalties.

In light of such concerns, most consequentialists are *indirect consequentialists*. They hold that although we ought to promote the general realization of value, it may be the case that we don't have reason to *aim to promote* the general realization of value. Rather, we may have reason to have those *other attitudes* the having of which more effectively promotes the general realization of value. As indirect consequentialists often put the point, consequentialism should be understood as presenting a criterion of right

action, but not a 'theory of deliberation' or 'decision procedure'. (Direct consequentialists, in contrast, insist on proceeding directly; they deny that we may have reason to have attitudes other than aiming to promote the general realization of value.)

Much more could be said here. We could go on to provide a precise account of the notions of *promoting* and *honoring*, and we could also note the variety of ways in which a consequentialist could be an indirect consequentialist. But these details, which are available elsewhere<sup>10</sup>, do not matter for the argument that follows. So, we can safely work with the rough sketch of consequentialism presented here. In the remainder of this section, I'll argue that Lang's version of buck-passing is not compatible with consequentialism, whether direct or indirect.

According to (*Modified BPV6*), *X* is good only if *X* has properties that give us reason to have a certain attitude towards *X*, and those properties of *X* that give us reason to have that attitude towards *X* would still be reason-giving in the absence of the *benefits* of having that attitude towards *X*. But here's the problem: for the indirect consequentialist, we have reason to have certain attitudes towards objects of value *precisely because* of the benefits of having those attitudes -- specifically, *precisely because* our having those attitudes *best promotes* the general realization of value. We could illustrate this objection with Pettit's example of personal loyalties. According to one possible theory of the good, what matters above all in life is the enjoyment of personal loyalties.<sup>11</sup> (Nothing really hinges on this particular claim; one could also make the same argument with liberty, happiness, or some other value or combination of values in place of personal loyalties.) An indirect consequentialist might say that I have a reason to *honor* loyalty, but I have a reason to have this attitude *only because* having this attitude

provides certain benefits -- specifically, having it best *promotes* the enjoyment of personal loyalties.<sup>12</sup> If there were no such benefits, I would not have any reason to have the attitude. And since my reason to have this attitude would not survive in the absence of the benefits of having it, it would follow, implausibly, from (*Modified BPV6*) that enjoyment of personal loyalties is not good.<sup>13</sup>

It's worth noting that (*Modified BPV6*) would also yield implausible results for *direct* consequentialists. According to direct consequentialism, we have reason to *aim to promote* value. One fairly obvious benefit of *aiming* to promote value is that doing so greatly increases the probability that *one will in fact* promote value. But let's run the counterfactual test and ask, 'If there were no benefits to my aiming to promote value -- that is, if my having this aim did not increase the probability that I will in fact promote value, or yield any other benefits -- then would I have any reason to aim to promote value?' It seems clear that we should answer 'No.' (Imagine a case in which you are certain that some aim of yours would be thwarted and there are no other benefits to your having that aim. What reason would there be to have that aim?) And so the counterfactual test in (*Modified BPV6*) would also yield implausible results for the direct consequentialist.

Perhaps we could provide an explanation for why Lang falls into error here. Lang is concerned to formulate buck-passing so as to make it immune to the Evil Demon counterexample. In the Evil Demon counterexample, the attitude that we have reason to have (because of the Demon's threat) is *admiration* -- an attitude that, typically, we don't have reason to have because of the *benefits* expected from having it. Our reasons to admire something (like a scientific discovery) seem to persist in the absence of the

benefits to be had from admiring it. But this is not so with other attitudes, including those attitudes central to consequentialism. Our reasons to *aim to promote* something of value do not persist in the absence of the benefits to be had from so aiming. And, for the indirect consequentialist, our reasons to have certain other attitudes (such as *honoring* personal loyalty) do not persist in the absence of the benefits to be had from having those attitudes. Perhaps Lang's mistake is that he focuses on reasons to admire at the expense of *other* attitudes we may, according to some ethical theory, have reason to have.

It is important to remember that buck-passing is intended as a formal or abstract account of value, one which should not rule out substantive ethical theories by definition. There may indeed be good reasons to reject consequentialism (or, at least, Pettit's particular conception of it), but such reasons are surely not to be provided by a reductive explanation of the concept *good*. Consequentialism may be false, but it is not false by definition. It's also worth noting that Scanlon, in his original presentation of the buck-passing view, noted the compatibility of buck-passing and consequentialism:

I therefore accept buck-passing accounts of both goodness and value. One could accept such an account while still holding a purely teleological conception of value, since nothing in the argument just given rules out the possibility that the reasons associated with something's being valuable are all reasons to promote it, or perhaps to promote states of affairs in which it figures in various ways.<sup>14</sup>

Scanlon presents a number of arguments against consequentialism, but he thinks a virtue of his account of buck-passing is its compatibility with consequentialism. But it seems that Lang's formulation of buck-passing cannot claim this same virtue.<sup>15</sup>

One final note: though I think, for the reasons advanced in §I above, that (*Modified BPV6*) is a better formulation of buck-passing than (*BPV6*), we should note that the objection presented here would also work against (*BPV6*). Suppose our theory of the good specifies something as good which is also *beneficial to us*. For example, suppose we think that developing one's own talents is good. According to direct consequentialism, we have a reason to *aim to promote* the development of our own talents. But, again, were there no benefits to us in having this aim, then we wouldn't have a reason to have this aim. And so it would follow, implausibly, from (*BPV6*) that it's not the case that developing one's own talents is good. (And, as before, an indirect consequentialist might hold that we have reason to have some *other attitude* towards the development of our own talents, and that we have reason to have that attitude only because of the benefits to us of having that attitude -- namely, that having that attitude best promotes the development of our own talents. It would again follow, implausibly, from (*BPV6*) that it's not the case that developing one's own talents is good.)

### §III.

The original *WKRP* objection to Scanlon's account of buck-passing challenges whether Scanlon's account really states a *sufficient* condition for something's being good. The Evil Demon is clearly not good, but yet he has properties that provide us with a reason to admire him. But the above objection to Lang's account of buck-passing challenges whether Lang really states a *necessary* condition for something's being good. We begin by asserting, by hypothesis, a certain theory of the good. We then note that the condition

stated on the right-hand-side of the biconditional in (*Modified BPV6*) and in (*BPV6*) may not be met if consequentialism, whether direct or indirect, is true.

In light of this objection, we should reject Lang's formulation of the buck-passing account of value. His formulation does indeed succeed insofar as it excludes what ought to be excluded: his account does not allow for the reasons provided by the Evil Demon's threat to make it the case that the Demon is good. But his account fails in that it excludes too much: his account also, when combined with (direct or indirect) consequentialism, renders certain plausible theories of the good false.<sup>16</sup>

## Notes

---

<sup>1</sup> T. M. Scanlon, *What We Owe to Each Other* (Cambridge, MA, 1998), p. 96. Some authors helpfully distinguish the two theses presented here: the *negative* thesis that being good is not a property that provides reasons for certain responses, and the *positive* thesis that for something to be good is simply for it to have the property of having other properties that do provide such reasons. See, for instance, Pekka Väyrynen, 'Resisting the Buck-Passing Account of Value', *Oxford Studies in Metaethics, Volume I*, ed. Russ Shafer-Landau (Oxford, 2006), pp. 295-300. This paper focuses on a problem for the positive thesis.

<sup>2</sup> Scanlon, *What We Owe to Each Other*, p. 97.

<sup>3</sup> See Wlodek Rabinowicz and Toni Ronnow-Rasmussen, 'The Strike of the Demon: On Fitting Pro-attitudes and Value', *Ethics* 114 (2004), pp. 391-423, at p. 400.

<sup>4</sup> Gerald Lang, 'The Right Kind of Solution to the Wrong Kind of Reason Problem', *Utilitas* 20 (2008), pp. 472-489, at pp. 472-473.

<sup>5</sup> The problem was first posed with this label by Rabinowicz and Ronnow-Rasmussen in 'The Strike of the Demon', though, as they acknowledge, it is the same problem as the 'conflation problem' for fitting-attitude theorists introduced in Justin D'Arms and Daniel Jacobson, 'Sentiment and Value', *Ethics* 110 (2000), pp. 722-748. There have been a number of attempts to solve the problem, and a number of difficulties posed for those attempts. See also, for instance, Jonas Olson, 'Buck-Passing and the Wrong Kind of Reasons', *Philosophical Quarterly* 54 (2004), pp. 295-300, Philip Stratton-Lake, 'How to Deal with Evil Demons: Comment on Rabinowicz and Ronnow-Rasmussen', *Ethics* 155 (2005), pp. 788-798, Wlodek Rabinowicz and Toni Ronnow-Rasmussen, 'Buck-Passing

and the Right Kind of Reasons' *Philosophical Quarterly* 56 (2006), pp. 114-120, Sven Danielson and Jonas Olson, 'Brentano and the Buck-Passers', *Mind* 116 (2007), pp. 511-522, and John Skorupski, 'Buck-Passing about Goodness', *Hommage à Woldek: Philosophical Essays Dedicated to Wlodek Rabinowicz*, ed. D. Egonsson, J. Josefsson, B. Petersson and T. Ronnow-Rasmussen (Lund, 2007).

<sup>6</sup> This is a simplified version of Lang's (*ED2*) case. (See Lang, 'The Right Kind of Solution', p. 474.) There are some differences that don't matter for the argument here. For instance, in Lang's Evil Demon cases, unlike other appearances of Evil Demon cases in the literature, the attitude that is called for is not admiration but 'valuing'. And according to (*ED2*), the Demon threatens us with punishment unless we 'value him for his own sake'. Nothing hinges on these differences.

<sup>7</sup> Lang, 'The Right Kind of Solution', p. 484.

<sup>8</sup> Philip Pettit, 'Consequentialism', *A Companion to Ethics*, ed. Peter Singer (Oxford, 1991), pp. 205-218, at p. 231.

<sup>9</sup> Pettit, 'Consequentialism', pp. 230-231.

<sup>10</sup> See Pettit, 'Consequentialism', pp. 232-233 regarding the former task, and Eric Wiland, 'How Indirect Can Indirect Utilitarianism Be?' *Philosophy and Phenomenological Research* 74 (2007), pp. 275-301 regarding the latter. There is indeed now a quite extensive literature on indirect utilitarianism. Wiland's paper presents a useful taxonomy of six different ways one could be an indirect utilitarian.

<sup>11</sup> I'll leave it open which 'lower-order' properties of personal loyalties provide us with a reason to have the attitudes that the consequentialist thinks we have reason to have towards personal loyalties. Presumably, the indirect consequentialist would claim that

---

one reason-providing property of personal loyalties is the fact that they are such that directly aiming to promote them is not the most efficient way of promoting them.

<sup>12</sup> It may be, as Scanlon notes in commenting on Pettit, that honoring is not a single attitude, but is constituted by a set of various attitudes. See Scanlon, *What We Owe to Each Other*, pp. 384, n. 20. This doesn't matter for the argument here. Suppose that honoring is constituted by a set of attitudes. According to the indirect consequentialist, one has reason to have that set of attitudes only because having that set of attitudes provides certain benefits: doing so best promotes personal loyalties. It would thus follow, in the way specified in the text, from (*Modified BPV6*) that personal loyalties are not good.

<sup>13</sup> Connoisseurs of the *WKRP* may be interested in how my example of indirect consequentialism relates to a somewhat similar example often discussed in the literature: the paradox of hedonism. According to the paradox of hedonism, as it's usually presented, the best way to get pleasure is not to aim to get pleasure, but to aim to get other things, like knowledge or freedom. (This case is first discussed in Rabinowicz and Ronnow-Rasmussen, 'The Strike of the Demon', p. 403.) Note that the idea here is that we have a reason to have a *different object* for some attitude; we have a reason to aim to obtain *knowledge or freedom*, instead of aiming to obtain *pleasure itself*. But my example involving indirect consequentialism is slightly different. It's not that one has reason to have a *different object* to one's attitude -- the relevant object of one's attitudes (personal loyalties) remains the same throughout -- but it's just that one has reason to have a *different attitude* toward that object (to *honor* personal loyalties, instead of *aiming to promote* them).

---

<sup>14</sup> Scanlon, *What We Owe to Each Other*, p. 98.

<sup>15</sup> Others have argued that buck-passing in general is biased in *favor of* consequentialism and against deontology. See Jonathan Dancy, 'Should we Pass the Buck?', *Philosophy, the True, the Good and the Beautiful*, ed. Anthony O'Hear (Cambridge, 2000), pp. 159-173, at p. 168. I here say nothing about this worry about buck-passing in general. I'm simply arguing here that *Lang's particular formulation* of buck-passing is not compatible with consequentialism.

<sup>16</sup> Thanks to Eric Wiland for valuable discussions about both consequentialism and value.
